

Table of contents

<i>Foreword by Ronald G. Ross</i>	vii
<i>Preface</i>	ix
1 Aligning IT with business	1
1.1 Historical background	3
1.2 What are business rules?	5
1.3 What is business rules management?	9
1.4 Why use a business rules management system?	12
1.5 The benefits	14
1.6 Summary	14
1.7 Bibliographical notes	15
2 Service oriented architecture and software components	17
2.1 Service oriented architecture and business rules	19
2.1.1 Business drivers, benefits and pitfalls	25
2.2 Service implementation using components	26
2.3 Agents and rules	32
2.3.1 Agent architecture	34
2.3.2 Applications of agents	37
2.4 Service oriented architecture and web services	38
2.5 Adoption strategies	48
2.5.1 After SOA	49
2.6 Summary	52
2.7 Bibliographical notes	53
3 Approaches to business rules	55
3.1 Database-centric approaches	55
3.2 GUIDE and the Business Rules Group	59
3.3 Using UML and OCL to express rules	59
3.4 Business rules management systems and expert systems	62
3.5 Other developments	66
3.6 Standards, directions and trends	67
3.7 Summary	71
3.8 Bibliographical notes	71

4 Business rules management technology and terminology	73
4.1 Rules and other forms of knowledge representation	74
4.1.1 Rules and production systems	76
4.2 Knowledge and inference	78
4.2.1 Semantic networks	80
4.3 Inference in business rules management systems	81
4.3.1 Forward, backward and mixed chaining strategies	82
4.4 Data mining and rule induction	87
4.5 Techniques for representing rules	90
4.5.1 Decision trees and decision tables	91
4.6 Uncertainty management	95
4.7 Ontology and Epistemology: the rôle of object modelling in natural language processing	100
4.8 Summary	102
4.9 Bibliographical notes	102
5 Features of business rules management systems	103
5.1 The components and technical features of a BRMS	105
5.1.1 Rules	108
5.1.2 Rule templates	109
5.1.3 Rule syntax checking	109
5.1.4 Procedures and algorithms	109
5.1.5 Ruleflows	109
5.1.6 Decision tables and decision trees	110
5.1.7 Inference	110
5.1.8 Uncertainty and explanation	111
5.2 BRMS products	113
5.2.1 Blaze Advisor	115
5.2.2 HaleyRules and HaleyAuthority	122
5.2.3 JRules	129
5.2.4 PegaRULES and Versata	136
5.3 A simple application	138
5.3.1 The application in Blaze Advisor	140
5.3.2 The application in HaleyAuthority	143
5.3.3 The application in JRules	146
5.4 Usability issues	147
5.5 Summary	148
5.6 Bibliographical notes	149
6 Development methods	151
6.1 Knowledge acquisition and analysis	151
6.2 System development	157
6.3 Halle's guidelines	159

xiv Business rules management systems

6.4	RulesSpeak guidelines	160
6.5	Summary	165
6.6	Bibliographical notes	166
7	A pattern language for BRMS development	167
7.1	What are patterns?	168
7.2	Why a pattern language?	176
7.3	The RulePatterns language – Part I	177
7.3.1	Patterns and patlets for requirements, process and architecture	180
7.3.2	Patterns for finding, writing and organizing business rules	199
7.4	The RulePatterns language – Part II	214
7.4.1	Patterns and patlets for knowledge elicitation	215
7.4.2	Patterns for product selection and application development	235
7.5	Related patterns and pattern languages	239
7.5.1	Arsanjani’s RuleObject patterns	239
7.5.2	KADS patterns	240
7.5.3	Organizational patterns	240
APPENDICES		
A	Business Rules Manifesto	241
B	A simple method for evaluating BRMS products	245
References and bibliography		261
Index		265
